

Sure, here's a passage on plantation suitable for Class V students:

****Plantation: The Green Treasure****

Plantation refers to the act of planting trees and plants, which is essential for the health of our environment. Trees provide us with oxygen, shade, fruits, and wood, and they play a crucial role in maintaining the balance of nature.

When we plant trees, we help to combat climate change. Trees absorb carbon dioxide, a harmful gas that contributes to global warming, and release oxygen into the air. This process helps to keep the air clean and reduces the impact of climate change. Plantations are also important for preventing soil erosion. The roots of trees hold the soil together, preventing it from being washed away by rain. This helps to protect the land and keeps it fertile for growing crops. Furthermore, trees provide a home for many animals and birds. They create habitats where wildlife can live and thrive. By planting more trees, we ensure that these creatures have a safe place to call home.

In addition to their environmental benefits, plantations can be beautiful and provide a peaceful place for people to relax and enjoy nature.
