

1. Assertion : Magnetite is an electromagnet.
Reason : Artificial magnets are stronger than natural magnets.
2. Assertion : We should not rub similar poles of two magnets.
Reason : Rubbing of similar poles leads to demagnetisation.
3. Assertion : Alloys of magnetic substances are used to make artificial magnets.
Reason : Alloys make the magnets strong.
4. Assertion : Magnets should be placed in keepers.
Reason : Keepers prevent self-demagnetisation of magnets.
5. Assertion : Doctors use an electromagnet to remove particles of iron or steel from a patient's eye.
Reason : An electromagnet is a temporary magnet.
