

Class 7 Science - Forests: Our Lifeline

1. Which of the following is known as the “green lungs” of the earth? a) Mountains b) Forests c) Oceans d) Deserts
2. Which gas is released during photosynthesis in forests? a) Carbon dioxide b) Nitrogen c) Oxygen d) Methane
3. The top layer of a forest is called: a) Canopy b) Understorey c) Shrubs layer d) Forest floor
4. Which of the following animals is a herbivore found in forests? a) Lion b) Tiger c) Deer d) Leopard
5. The process of water moving from plants to the atmosphere is called: a) Evaporation b) Transpiration c) Condensation d) Infiltration
6. Which of the following is not a product we get from forests? a) Timber b) Honey c) Petroleum d) Gum
7. Which microorganism helps in decomposing dead plants and animals in a forest? a) Virus b) Bacteria and fungi c) Protozoa d) Algae
8. What do forests prevent by binding the soil with roots? a) Floods b) Soil erosion c) Earthquakes d) Volcanic eruptions
9. Which of the following is called the “house of wild animals”? a) Rivers b) Forests c) Deserts d) Grasslands
10. The continuous interaction of plants, animals, and microorganisms in a forest forms a: a) Habitat b) Ecosystem c) Population d) Species
