

Case study

On the "plantation Day", students of class 3 participated in a tree plantation drive. Plants give us oxygen to breathe and help keep our Earth clean and green. The school received 3925 saplings. On Day 1, students planted 1438 saplings. On Day 2, they planted 1257 saplings. There were still some saplings left for Day 3.

Question:

- 1)What is the total number of saplings that students planted on Day 1 and Day 2?
- 2)How many saplings are still left to be planted on Day 3?
- 3)What is the difference between the number of saplings that were planted on Day 2 and Day 3?
