

Case study (Ch-7)

The teacher bought 13 packets of chocolates. Each of the packets had 28 chocolates. The chocolates were shared equally among 14 students.

Answer the following questions:

- (a) How many chocolates were there altogether?
- (b) How many chocolates did each student get?
- (c) If 1 more packet is added, how many chocolates will be there altogether?
- (d) How many chocolates are needed to make 654 chocolates altogether?
- (e) Write the mirror image of "ACTIVITY".
